

**Learn today. Design tomorrow.****Farnborough • October 6 - 8, 2009**

**Wibu-Systems will be unveiling its new SD Card and CompactFlash Card form factor of its CodeMeter platform at the Embedded Systems Show 2009 in Farnborough.**

**Milton Keynes** – This year at the Embedded Systems Show in Farnborough, Wibu-Systems will be unveiling two new form factors of its award winning CodeMeter platform.

Wibu-Systems AG has been closely cooperating with three other German companies and a research institute in the “Pro-Protect” project. The aim of the project was to research effective methods of protecting production machinery against piracy, duplication and industrial espionage. As result of this cooperation Wibu-Systems has incorporated two new form factors to its product line that extends the CodeMeter’s usability in industrial environments.

As of now, the CodeMeter technology for software licensing and software protection is readily available in the following form factors: USB, PC Card, ExpressCard, SD Card and CompactFlash Card. A microSD form factor will be available later in the year. Furthermore, Wibu-Systems has a comprehensive software only licensing system called CodeMeterAct, which is activation based and can easily be integrated with an eCommerce or ERP system of vendors’ choice for management and safe distribution of digital content on the Internet.

For visitors who like to know more about Wibu-Systems and its CodeMeter platform solutions, more information is available on stand **531, 7-8 October at the Embedded Systems Show 2009 in Farnborough**. A workshop will be given on Thursday the 8th of October from 09.45 to 10.45 AM entitled *Protection of embedded systems and software against piracy* given by Wibu’s Security Expert Marcel Hartgerink, the workshop will cover Wibu’s vanguard solutions for the protection of embedded systems.

**About CodeMeter:**

CodeMeter is a unique combination of a crypto-chip and SLC flash memory. SLC is the quality standard for flash memory used in the industry. The application can be distributed via the flash memory component and will be deciphered with the 128 bit AES algorithm on the same form factor. At the launch at the fair the SD Cards with 2 GByte flash memory and CompactFlash Cards with 2 GByte flash memory will be available on stock. Test kits will be available for implementation and tests. Later this year SD Cards with 4 and 8 GByte flash memory and CompactFlash Cards with 1, 4, 8 and 16 GByte flash memory will follow.
