

Wibu-Systems develops new solution for creating, delivering, and managing licenses

CeBIT premiere: New software “CodeMeter License Central“ allows for effective license management

Karlsruhe – Top notch security is only one part of the equation that marks a truly great protection system. Another part is the efficient management and delivery of licenses and license types. CodeMeter incorporates a new Back Office System: CodeMeter License Central.

CodeMeter License Central is a standardized ticket system which provides for the efficient integration of CodeMeter or CodeMeterAct protection into the sales, production and support processes. Using this tool, the software developer is able to quickly and automatically create, manage, and deliver all required licenses to their customers. The new underlying database of CodeMeter License Central is easy to integrate into existing ERP systems, such as SAP, or into online shops, such as Cleverbridge, ShareIt, Digital River, or Element5. At the CeBIT, Wibu-Systems will exhibit this new tool to interested companies at CeBIT in Hall 11, Booth B41, how they can use the new software.

Wibu-Systems provides training for CodeMeter License Central in two versions through custom training courses in Karlsruhe, Germany:

The Desktop version is a complete service package and ready for use in a virtual machine. Customers protecting with CodeMeter or CodeMeterAct can download the software via www.wibu.com, and start to create, manage and deliver the licenses to their customers.

Moreover, an Enterprise version is available: customizable to meet special requirements of each company, it includes add-on modules, such as, the ERP connector and the eCommerce connector. This allows a software vendor to provide a twenty-four-seven license shopping shelf to his customers in his online shop.

Says Oliver Winzenried, C.E.O. and founder of Wibu-Systems AG: “CodeMeter License Central provides our customers with a fantastic benefit: the creating, delivering and managing licenses will be mere child’s play. The software vendor writes the licenses into the CmStick, creates activation files, or enables the customer to automatically collect licenses twenty-four-seven via the Internet. The staff of our customers already working with the new software is enthusiastic.”
