Secure software protection on tour in Benelux

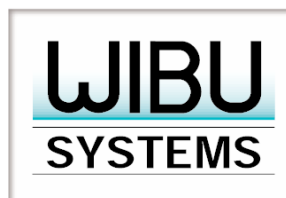

New software and content protection at Tech-Ed

ANTWERP / HAAKSBERGEN - The company WIBU-SYSTEMS NV is specialised in software protection and will present the state-of-the-art solution CodeMeter at Tech-Ed 2005 in Amsterdam at booth C30. As a special service for companies, Wibu-Systems will put seminars on different locations (for the details see www.wibu.be).

CodeMeter is a Digital Rights Management solution that includes automatic sales transactions, highly secure protection plus total integration for the sales channel. CodeMeter is used by vendors of software and digital content who want to benefit from new sales models on the Internet.

The heart of the system is the CM-Stick, an encryption and storage device in the form factor of a small USB device. CodeMeter gives the user many advantages: mobile storage of thousands of licenses for different products from different vendors; personal security benefits like a password manager, secure login and file encryption with a virtual drive; plus optional integrated flash drives of up to 2 GByte. Additional content provider options are floating network licenses, precise usage measurement and expiration and activation date handling.

Due to the multi-vendor approach CodeMeter can also be used for low cost content or software. The vendor can offer his product for a reduced price with the confidence that strong anti-piracy technology is in place. The honest user gets a good deal. The result: a win-win situation for everyone.
